

Legacy Fixed Gear Landing Gear, Fairing, and Wheel Pant Installation

- Wheel pants and fairing should simultaneously be installed.
- End result is having both fairing and wheel pants parallel with stream lines.
- Wheel pant brackets should be installed between landing gear foot and axel. Making sure correct bolt length is used in two blind holes at the top of the foot.
- Torque bolts to **in*lbs**.
- Install pants over brackets. See picture/video.
- Brackets are made with extra material, trim and bend tabs to conform with inside of pants.
- Drill thru wheel pants into the center of the remaining tab for a #10 screw. Install **K1000-** nut-pate on bracket.
- Trim and fit inspection door to pant.
- If bracket does not conform sufficiently to the pant after molding it. A flox release may be done.
- Leg fairing should be trimmed and installed. The
